Edexcel and BTEC Qualifications

Edexcel and BTEC qualifications are awarded by Pearson, the UK's largest awarding body. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at www.edexcel.com or www.btec.co.uk. Alternatively, you can get in touch with us using the details on our contact us page at www.edexcel.com/contactus.

Pearson: helping people progress, everywhere

Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: www.pearson.com/uk

General Marking Guidance

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.

EDEXCEL GCE MATHEMATICS

General Instructions for Marking

1. The total number of marks for the paper is 75.

2. The Edexcel Mathematics mark schemes use the following types of marks:

- M marks: method marks are awarded for 'knowing a method and attempting to apply it', unless otherwise indicated.
- A marks: Accuracy marks can only be awarded if the relevant method (M) marks have been earned.
- B marks are unconditional accuracy marks (independent of M marks)
- Marks should not be subdivided.

3. Abbreviations

These are some of the traditional marking abbreviations that will appear in the mark schemes.

- bod – benefit of doubt
- ft – follow through
- the symbol $\sqrt{}$ will be used for correct ft
- cao – correct answer only
- cso - correct solution only. There must be no errors in this part of the question to obtain this mark
- isw – ignore subsequent working
- awrt – answers which round to
- SC: special case
- oe – or equivalent (and appropriate)
- dep – dependent
- indep – independent
- dp decimal places
- sf significant figures
- ∗ The answer is printed on the paper
- ◻ The second mark is dependent on gaining the first mark

4. All A marks are 'correct answer only' (cao.), unless shown, for example, as A1 ft to indicate that previous wrong working is to be followed through. After a misread however, the subsequent A marks affected are treated as A ft, but manifestly absurd answers should never be awarded A marks.

Paper 3B/ 2021: Statistics 1 Mark scheme

Question	Scheme	Marks	AOs
1(a)	$x = 4\times 43 - 47 - 34 - 36 = 55*$	B1*	3.4
		(1)	
(b)	$\nu = 4 - 1 = 3$ since the only constraint is that the totals agree	B1	2.4
		(1)	
(c)	H_0: The die is unbiased H_1: The die is biased	B1	2.1
	Test Statistic $= \frac{(47-43)^2}{43} + \frac{(34-43)^2}{43} + \frac{(36-43)^2}{43} + \frac{(55-43)^2}{43}$	M1	1.1b
	$= 6.744\ldots$	A1	1.1b
	$\chi^2_{(3,0.05)} = 7.815$	B1	1.1b
	Not in the critical region since 7.815 > "6.74…" therefore insufficient evidence to reject H_0 Inconclusive test - consistent with the **die** being unbiased.	A1	3.5a
		(5)	
			(7 marks)

Notes:

(a)	**B1*:**	Using the uniform model to show the missing observed value eg $x = \frac{43 - 0.25\times(47+34+36)}{0.25} = 55$
(b)	**B1:**	$4-1=3$ (may be in words) and explanation of what the constraint is
(c)	**B1:**	Both hypotheses correct. eg The data fits a discrete uniform distribution
	M1:	Attempting to find $\sum \frac{(O-E)^2}{E}$ or $\sum \frac{O^2}{E} - N$ May be implied by awrt 6.74 or p value of 0.0805…
	A1:	awrt 6.74 or $\frac{290}{43}$ oe May be implied by p value of 0.0805…
	B1:	awrt 7.82 (Calc 7.8147…)
	A1:	Drawing correct inference in context. Need the word die or tetrahedral

(d)	The number of periods is large and the probability of receiving 8 calls in 30-minutes is small.	B1 (1)	2.4
(e)	H_0: $\lambda = 30$ H_1: $\lambda \neq 30$	B1	2.5
		(1)	
(f)	$X \sim$ Po(30)	B1	3.3
	$P(X \geqslant 40) = 1 - P(X \leqslant 39)$	M1	1.1b
	$= 0.04625…$	A1	1.1b
	0.046… > 0.025 or no evidence to reject H_0 There is insufficient evidence at the 5% level of significance that the number of **calls** received is different on a Saturday	A1 (4)	2.2b
			(14 marks)

Notes:

(a)	**M1:**	For calculating the mean and setting up the correct model. Poisson may be implied by 0.8883 or better or 1 – awrt 0.1117 but must see 3.75 or 1.25×3
	A1*cso:	$P(C \geqslant 2) =$ awrt 0.8883 or 1 – awrt 0.1117 = 0.888 Must see $P(C \geqslant 2)$ oe
(b)	**M1:**	Setting up a new model using their answer to (a) Implied by correct answer
	A1:	awrt 0.0216 or awrt 0.0215
(c)	**B1:**	awrt 0.0228
	M1:	Setting up a new model B(150, "0.0228") and using np (working seen if incorrect)
	M1:	Using the model Po(their np) Must be clearly stated and $P(E \geqslant 3)$ oe seen
	A1*cso:	Only award if the previous 3 marks have been awarded and 0.664 is stated. NB Use of B(150 0.02281) gives 0.668
(d)	**B1:**	Idea that $n = 150$ (number of periods selected) is large and p is 0.022… (exactly 8 calls in the time period) is small.
(e)	**B1:**	Both hypotheses correct using λ or μ allow 1.25 or 3.75
(f)	**B1:**	Realising Po(30) needs to be used. NB Implied by correct answer or $P(X = 40) = 0.0139…$
	M1:	Writing or using $1 - P(X \leqslant 39)$ or if CR method for $P(X \geqslant 42) = 0.0221…$
	A1:	0.04… or awrt 0.05 or CR $X \geqslant 42$ oe must be CR and not probability
	A1:	A fully correct solution and correct inference in context. Calls required If put this prob but then give Cr X >= 40 M1A1A0
